

**Section 14: Plan Interconnections**

Each section of this Plan has been reviewed to ensure that the recommendations are consistent and in balance with each other. The Plan is fundamentally interconnected through all of its goals, objectives and recommendations. Its basis is provided in the Land Use Element, which discusses the importance of targeting future growth and development inside the urban growth areas, while preserving rural areas for agricultural production and natural resource preservation. The recommendations in all other Plan elements are structured to support the desired land use patterns, ensure the long-term health of the agriculture industry and support the Borough as the economic and community center of the Region.
